

FLOATING SEAT TRIPLE OFFSET BUTTERFLY VALVES

Intertek

VAHN-TECH International Inc., headquartered in Toronto, Canada is a unique company within the Flow Control Industry.

- ✳ 'vt' brand = high quality certified products (API, NSF, CSA, WRAS etc.)
- ✳ Valves, Actuators and Accessories – all 'vt' branded
- ✳ Width and Depth of Product Offerings
- ✳ Flexibility to customize products to customer needs
- ✳ Specialized user-friendly products including large sizes
- ✳ Quick Response
- ✳ Reduced Delivery times
- ✳ Efficient after sales service
- ✳ Competitive Pricing

VAHN-TECH International Inc. is a customer focused organization based on “Value-Add” and “Quality Service” principles. Achieving long term partnership with our customers and being their supplier of choice is our prime mission.

We develop, manufacture and market VAHN-TECH (vt) branded Valves, Actuators, Automatic Control Valves and Accessories for variety of Industrial Applications. Our product range includes:

Oil and Gas

Water and Sewage,
Desalination

Chemicals

Paper and Pulp

Irrigation

Power Plants

Various
Industrial Applications

We can supply all types of valves with following materials of construction like:

Ductile Iron, Cast Iron, Carbon Steel, Stainless Steel – SS304, SS304L, SS316, SS316L, Duplex Stainless Steel, Super Duplex, Alloy, Monel and Inconel with variety of seating and stem configurations.

Flow Characteristics	
Torque Values	
Pressure & Temperature Ratings	
Product Selection	11

1. Design Standards

Applicable Standards	
Design Standard:	API 609
End Connection:	ASME B16.5 / ASME B16.47 / ASME B16.25
Face-to-Face:	API 609 / ASME B16.10
Test & Inspection:	API 598
Fire-Safe:	API 607
Low Fugitive Emission:	ISO 15848-2015
NACE:	MR 0715

2. Principle of Operation

The triple-offset geometry ensures that the body and disc come into contact only at the final shut-off position. This eliminates wear and tear due to friction between mating surfaces during operation, reduces operating torque and enhances product life.

Offset 1

The shaft of the valve is behind the disc, providing a continuous sealing area all around the disc.

Offset 2

The shaft is offset from the pipe centerline allowing displacement of the sealing from the seat during the 90° opening.

Offset 3

Axis of conical sealing is inclined to the centreline of valve eliminating friction during open and close operations thereby achieving uniform sealing around complete seat.

3. Design Features

- ✦ Fully bi-directional design with floating seat on the body
- ✦ Anti-blowout proof stem for high dependability, fully compliant with API609
- ✦ Inherently fire-safe for both composite and metal seats
- ✦ Double stem structure: Lower flow resistance & reduced energy consumption
- ✦ High temperature resistance up to +850°C
- ✦ Cryogenic application to -196°C
- ✦ Replaceable Disc & Body Seal on site
- ✦ Extended service lifetime
- ✦ Design available for high pressure - up to Class 2500

Pressure Testing and Leakage Rate

Shell Test Pressure	:	Nominal Pressure *1.5
Positive Test Pressure	:	Nominal Pressure*1.1
Reverse Test Pressure	:	Nominal Pressure*1.0
Positive and Reverse Air Test	:	0.6 MPa
Zero Leakage Seat Tightness	:	API 598 / Leakage Class VI

4. Seat Ring Design Features

Seat Rings (or Seal Rings) are replaceable – on site – on both the Body and the Disc. Seat rings are fixed with bolts to ensure enhanced replaceability.

Solid Seal Ring

Metal to Metal Seal Ring

Disc Seat Rings are available with Metal-to-Metal sealing and Multi-layer sealing. Multi-layer sealing is made of composite layers of Stainless Steel and Non-metal material. Non-metal material can be Flexible Graphite, PTFE or other material depending on the media and operating conditions.

Multi-layer Seal Ring

Multi-layer Seal Ring

Main Flow Direction

Opposite Flow Direction

Floating Seat for Bi-directional Sealing: The body seat can move between the body and the seat retainer to allow 100% leakage tightness in case of backflow.

Disc Seat Ring Machining: The seat is specially designed with elliptic shape instead of round shape. The upgraded seal can better control the expansion and contraction deformation during changing temperature conditions, improving the sealing performance across the whole operating range of the valves.

Cambered Sealing Surface: The Seal Rings are machined with a rounded sealing surface to improve the contact between the 2 seal rings. This design also allows for line sealing making the Floating Seat Butterfly Valves in the configuration suitable for media with impurities such as:

1. Mucus, Granular Medium
2. Solid Powder
3. Crystallized Medium
4. Liquid Medium with High Temperature Curing
5. Fiber Slurry
6. High Temperature Melts

5. Available End Connections

Wafer

Lug

Butt-Weld

Double Flange

6. Material of Construction

Cv CURVE

$$Q = Cv \sqrt{\frac{\Delta p}{G_L}}$$

Where:
 Q = Flow in gpm
 Δp = Pressure drop through the valve (psi)
 G_L = Specific Gravity (for water at 60°F = 1)

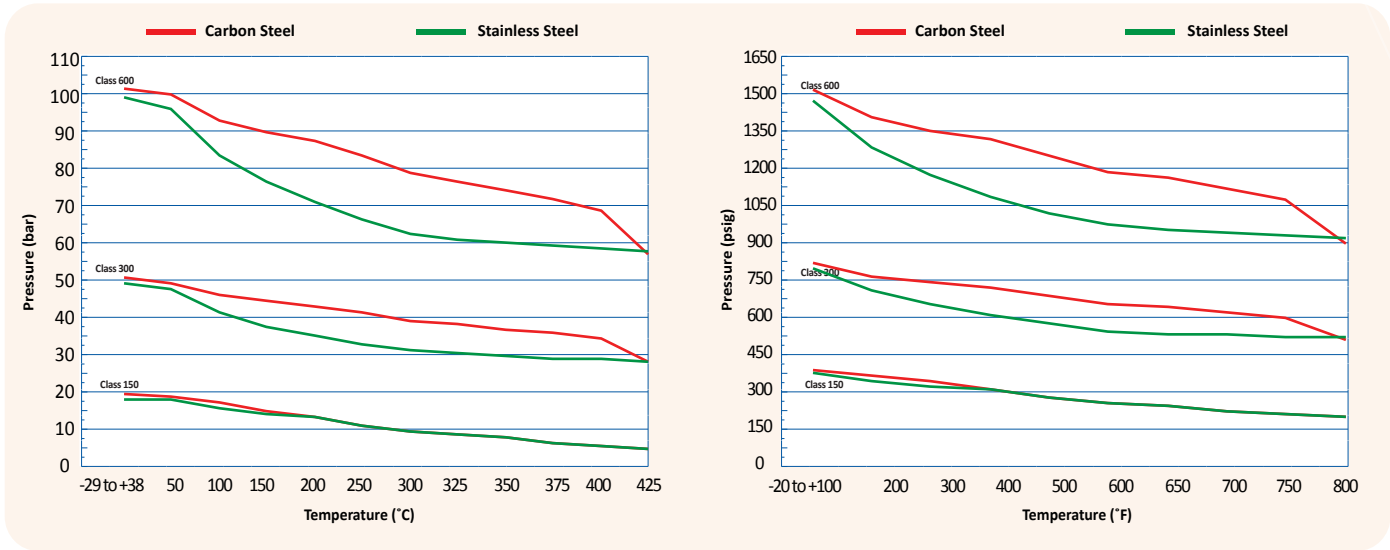

b. Torque Values

unit: Nm
